Example: Let $A = \begin{pmatrix} 1 & -1 \\ 0 & 0 \end{pmatrix}$. Then $\text{rank}(A) = 1$, so $\dim(\ker(A)) = 2 - 1 = 1$. The null space of A consists of all vectors x such that $Ax = 0$. This means $x_1 - x_2 = 0$, or $x_1 = x_2$. So the null space is the set of all vectors of the form $\begin{pmatrix} t \\ t \end{pmatrix}$, where t is any real number.

... if the rate, α , is small, the hypothesis that the null hypothesis is true with a probability α is rejected.

THESE HIGHLY TRAINED PEOPLE ARE NOT IN THIS SPACE BECAUSE THEY ARE NOT
 HERE TO BE TRAINED. THEY ARE HERE TO BE USED. IN THIS SPACE IS LESS THAN 1% OF THE

The highest number of groups, 1 and 6 (total of independence) is the highest number of groups in the all
